

# Inclusive Hydroponic Crops Newsletter

Welcome to **Inclusive Hydroponic Crops**:  
Promoting social inclusion of people with disabilities  
through hydroponic cultivation.

We are pleased to launch  
Inclusive Hydroponic Crops, a  
one-year Erasmus+ project  
(2025-2026) aimed at training  
people with disabilities to carry  
out simple yet effective  
agricultural activities. This  
initiative promotes innovative  
learning, enabling participants  
to develop their individual  
skills.

## Partners & Collaboration

In this project, we work hand in hand with Aspace Sevilla, from Spain and its users with cerebral palsy. We are united by a shared commitment to empowering people with disabilities through hydroponic crops.

## Key objectives

- Empower people with disabilities through hands-on hydroponic farming.
- Promote social inclusion by integrating participants into sustainable agricultural activities.
- Develop individual skills through structured learning and adaptive methods.
- Foster innovation in education by using hydroponic systems as a tool for accessible learning.

## First meeting in Sevilla

In our first meeting, we were able to establish the objectives, responsibilities, and visit the facilities and the professionals working there. We also planned the first phase, during which the necessary materials will be developed to facilitate the management and organization of the project.

The Inclusive Hydroponic Crops journey officially began in March with our first meeting in Seville with the Aspace Association, organized by David Valenzuela, the association's director.

We are delighted to have successfully aligned our efforts and laid a solid foundation for this project. Stay tuned for updates and the results of our activities!
